

Project: RenewSure – Smart Contract Expiry & Renewal Tracker

Phase 10: Presentation and demo

Project Title : RenewSure – Smart Contract Expiry & Renewal Tracker

Project done by: Runal Anil Parlewar

Date of completion: 25/9/2025

❖ Problem Statement:

- Many organizations rely on manual methods to track contracts, which often leads to missed renewals, duplicate records, and compliance risks. Without proper visibility, managers realize the problem only after the contract has expired. This results in revenue loss and operational inefficiency.
- RenewSure solves this by automating contract expiry alerts, preventing duplicates, sending timely reminders, and giving managers clear dashboards to track contract health.

❖ Salesforce Solution:

- Automated Contract Expiry & Renewal:
 - Triggers mark contracts as *Expired*.
 - Renewal records auto-created with dates & values.
- Smart Alerts & Approvals:
 - Email reminders before expiry.
 - Approval process for renewal requests.
- Clean Data:
 - Data Import Wizard & Data Loader used.
 - Duplicate rules prevent repeated entries.
- Integration Ready:
 - Platform Events & Change Data Capture.
 - External Services configured for API expansion.

❖ Future Work :

- Mobile Access:
 - LWC / Salesforce Mobile app for managing contracts on the go.
- Email Alert Flow Enhancements:
 - Error-free execution by replacing current flow limitations with Apex-Triggered Flows.
 - Smarter scheduling of renewal reminders (weekly / customizable).
- Advanced Integrations:
 - Connect with ERP & billing systems for automated invoicing.
- Scalability:
 - More automation rules as contract volume increases.
